Release Notes	2
Detailed Changelog	2
New in Release 2.2	2

Summary

Version String	2.2.0
Major Version	2
Minor Version	2
Increment Number	0
Release Date	February 1, 2022
Release Branch	2.2.0

Release Notes

ContraxSuite Release 2.2 is the thirty-third open source release. It became generally available on February 1, 2022.

Detailed Changelog

New in Release 2.2

- Various performance and stability improvements.
- Added new WebSocket notifications for the following:
 - Moving clusters from a Batch Analysis into a Contract Analysis project;
 - Detecting Field Values;
 - “Locate Terms” and “Locate Companies” tasks;
 - Running Document Similarity and Text Unit Similarity tasks;
- Updated API docs: Removed coreapi schema, updated OpenAPI schema URL.
- Improved date parsing.
- Improved Celery tasks for clustering of documents.
- Added “Detect Field Values” task information in the “Processing Status” tab in the grid.
- Improved the functionality of importing Document Types to an instance.
- Updated authentication session status after purging tasks in the project.
- Added a validation to prevent sending an “Assignee” notification if a user is the same as document assignee.
- Decreased delay when navigating to the next clause to review.
- Improved the action details on document audit history.
- Updated Social Accounts API URL.

Improved Features

- Added functionality for in-app notifications for “Locate” tasks, “Detect Field Values” tasks, Document and Text Unit “Similarity” tasks, and importing clusters from a Batch Analysis to a Contract Analysis project.
- Changed OpenAPI schema for better functionality.
- Continued work on implementing Kubernetes.
- Improved coordinates for annotation highlights.
- Improved the processes for deleting and cleaning documents from an instance.
- Increased the speed of “Locate” tasks.

Bug Fixes

- Admin Task for clustering text units was failing due to a database integrity error.
- Document Explorer data tables would still show data from a project that had been “soft” deleted.
- Fixed a bug where some task logs were being stored for longer than necessary.
- Fixed a bug related to accessing APIs, and functionality around API calls.

- Fixed a bug related to actions after creating a new project.
- Fixed a bug related to “connection already closed” notifications.
- Fixed a bug related to document assignment notifications for iManage integrations.
- Fixed a bug related to Document Type import/export.
- Fixed a bug related to Doc2Vec “Text Unit” clustering.
- Fixed a bug related to “Hide Until JS/Python” condition for the related_info field.
- Fixed a bug related to notifications when a user tries to sort or filter by message.
- Fixed a bug related to document uploading when a project has option OCR_ENABLE=False.
- Fixed bugs related to Document Field Detectors on Document Field pages.
- Fixed a bug where users couldn’t save project-level app vars in the Django UI.
- Re-clustering was sometimes failing.
- Users would improperly be logged out of the system when initiating a “Purge” task.
- Various bug fixes related to the new Text Extraction System (TES)
